RENU28® REDOX REVITALIZING GEL

Dermatest® performed a 12-week clinical-dermatological study to verify visible improvement of cellulite. They measured length and breadth of adipose lobules (fat).

RESULTS

Clinical study results showed a visible decrease. Other cellulite treatments use inflammation and fillers for a temporary effect.

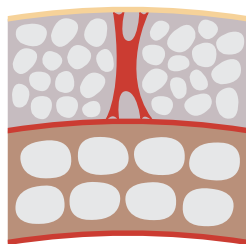

Dermatest conducted an additional 12-week elasticity study on human thigh skin.

RESULTS

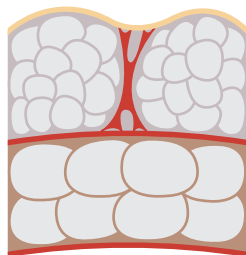

> Thigh skin elasticity improved an average of 20.9%.
